Introducing QMetry 3.5!!

Take a sneak peek of QMetry 3.5 loaded with a lot of new features:

Dashboard that serves all:

- Download and distribute your dashboard
- Choose to see the metrics that are important to you
- Dashboard across build/release/project

Simplified and superlative Test Execution:

- Create new platforms and link Test Suites
- Record & compare different run results
- Re-run the same test suite across the different platforms & compare the run details in Execution History

Manage what you see through the “Profile” Feature

- Choose where you want to start in QMetry upon login
- Change the amount of records viewable
- Edit your Name/Email information

QMetry continues to be the convergence platform for tools across the testing lifecycle:

QMetry can be integrated with tools across the testing lifecycle due to its robust architecture and extensive web APIs. The customer centric approach of our QMetry team has enabled us to bag integration with various tools to provide seamless – one tool experience to the customers. Continuing the trend, we are glad to share that QMetry is now integrated with TARGETPROCESS and ELEMENTOOL. Request for more information on [Integration usecases](#)

Before you begin using it – we have it: QMetry – JIRA 4.0

Planning to upgrade to JIRA 4.0 and wondering if your test management tool can cope up with that?? Well, if you are a QMetry user – you need not worry – QMetry comes with an out of the box integration with JIRA 4.0.
